

## Class 8 quadrilaterals

### \* Congruency ( $\cong$ )

Two figures or objects are congruent if they have the same shape and size or we can say is mirror image of each other.

rectangle  $ABCD \cong$  rectangle  $QSRP$

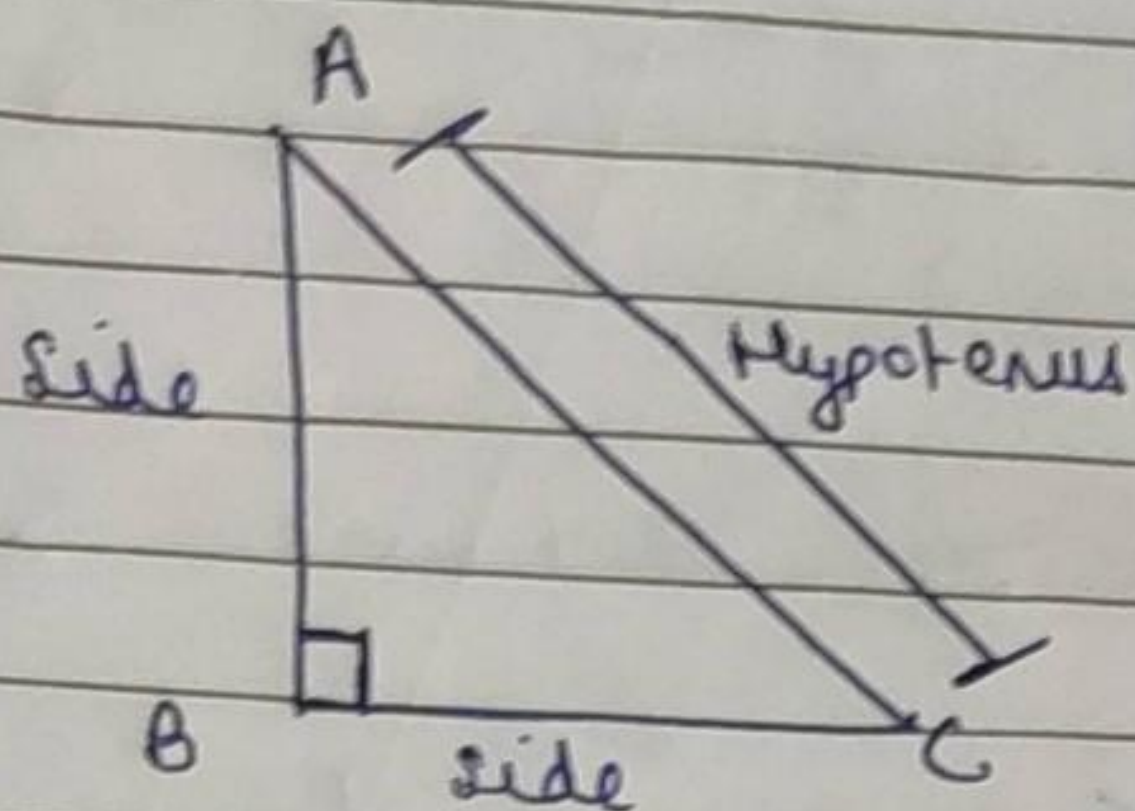

### \* Congruency in triangles

Properties

SSS	SAS	ASA	RHS
Side Side Side	Side Angle side	Angle Side Angle	Right Hypotenuse Side
$\triangle ABC \cong \triangle PQR$	$\triangle ABC \cong \triangle PQR$	$\angle ABC = \angle DCB$ $\angle ACB = \angle DBC$ $BC = BC$ (Common) $\triangle ABC \cong \triangle DCB$	$\triangle ABC \cong \triangle FDE$

## \* Right angle triangle

In right  $\triangle ABC$ ,

$$\Rightarrow \angle ABC = 90^\circ$$

$\Rightarrow AB$  and  $BC$  are sides

$\Rightarrow AC$  is hypotenuse

Hypotenuse  $\rightarrow$  side opposite to right angle

## \* Concept of parallel lines and transversal

$l_3$  is transversal to line  $l_1$  and  $l_2$

Transversal  $\rightarrow$  line cutting ~~2 par.~~ 2 or more parallel lines

## \* Types of angles

1) Alternate interior angles  
(2 pairs)

- $\angle 1$  and  $\angle 6$  are alternate interior angles
- $\angle 3$  and  $\angle 5$

opposite sides  
of transversal

between

(4 pairs)

- 2) Corresponding angles [ same side of transversal  
dono line ke upar ya dono lines ke  
neeche ]

$\angle 2$  and  $\angle 6$  are corresponding  $\angle$ s.

$\angle 1$  and  $\angle 5$  are corresponding  $\angle$ s.

$\angle 4$  and  $\angle 8$  are corresponding  $\angle$ s.

$\angle 3$  and  $\angle 7$  are corresponding  $\angle$ s.

- 3) Vertically opposite angles (VOA)

$\angle 1$  and  $\angle 3$  are vertically opp.  $\angle$ s.

$\angle 2$  and  $\angle 4$  are vertically opp.  $\angle$ s.

$\angle 1$  &  $\angle 3$  are VOA

$\angle 2$  &  $\angle 4$  are VOA

$\angle 5$  &  $\angle 7$  are VOA

$\angle 6$  &  $\angle 8$  are VOA

- 4) Angles on a line form  $180^\circ$

$$\angle 1 + \angle 2 + \angle 3 = 180^\circ$$

$$\angle 1 + \angle 2 + \angle 4 = 180^\circ$$

$$\angle 4 + \angle 5 + \angle 6 = 180^\circ$$

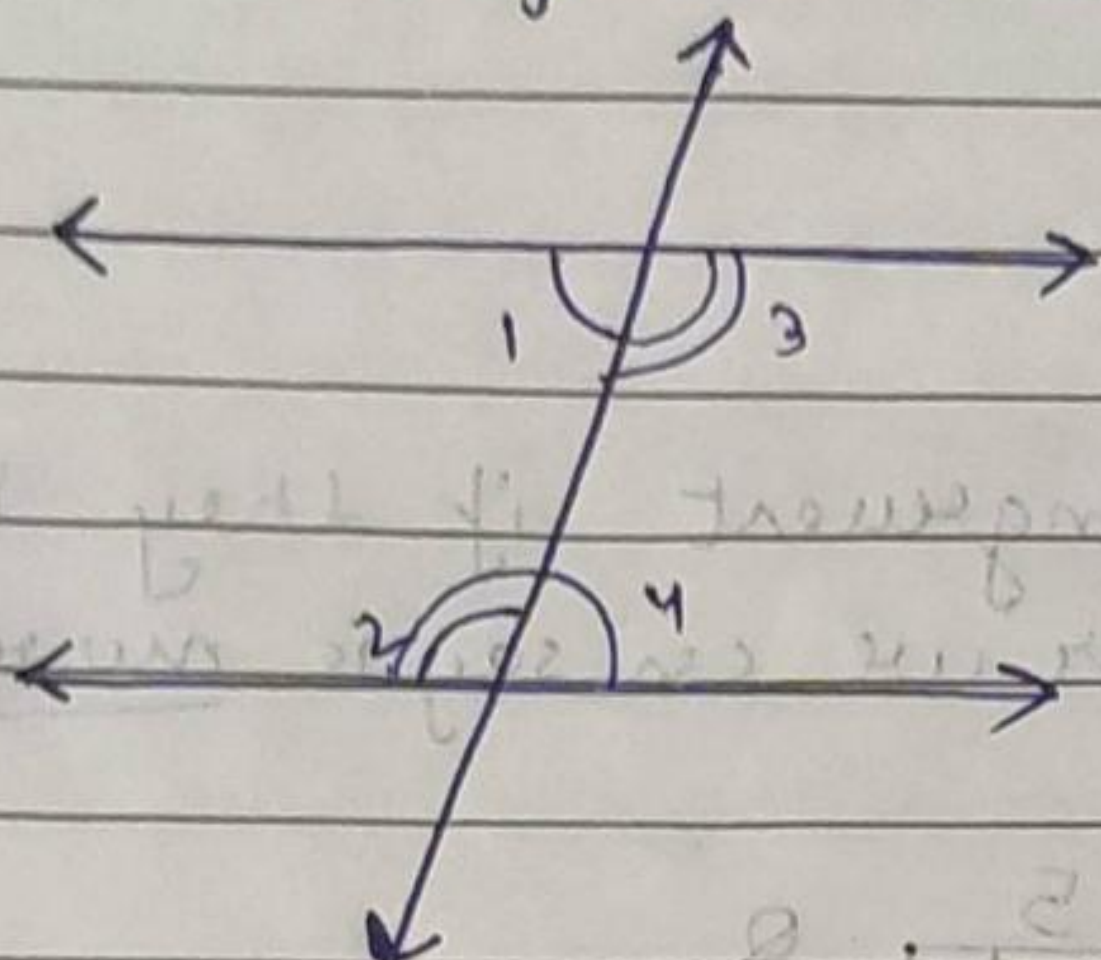

$$\angle 6 + \angle 5 + \angle 3 = 180^\circ$$

$$\angle 6 + \angle 3 + \angle 2 = 180^\circ$$

$$\angle 1 + \angle 4 + \angle 5 = 180^\circ$$

## 5) Cointerior Angles

[angles in between the two <sup>parallel</sup> lines on the same side of transversal] $\angle 1$  and  $\angle 2$  are cointerior  $\angle$ s $\angle 3$  and  $\angle 4$  are cointerior  $\angle$ s

$$\angle 1 + \angle 2 = 180^\circ$$

$$\angle 3 + \angle 4 = 180^\circ$$

Points to remember

- A] \*
- 1) Alternate  $\angle$ s are equal only if lines are  $\parallel$ .
  - 2) Corresponding  $\angle$ s are equal only if lines are  $\parallel$ .
  - 3) Cointerior  $\angle$ s sum up to  $180^\circ$  only if lines are  $\parallel$ .

- B] \*
- 1) Vertically opposite angles are always equal and are formed at intersection point of any 2 lines

- 2) Angles on a straight line always sum up to  $180^\circ$ .

Worksheet  
Class 2 quadrilaterals

Q1. Identify the type of <sup>shaded</sup> angles in following diagrams

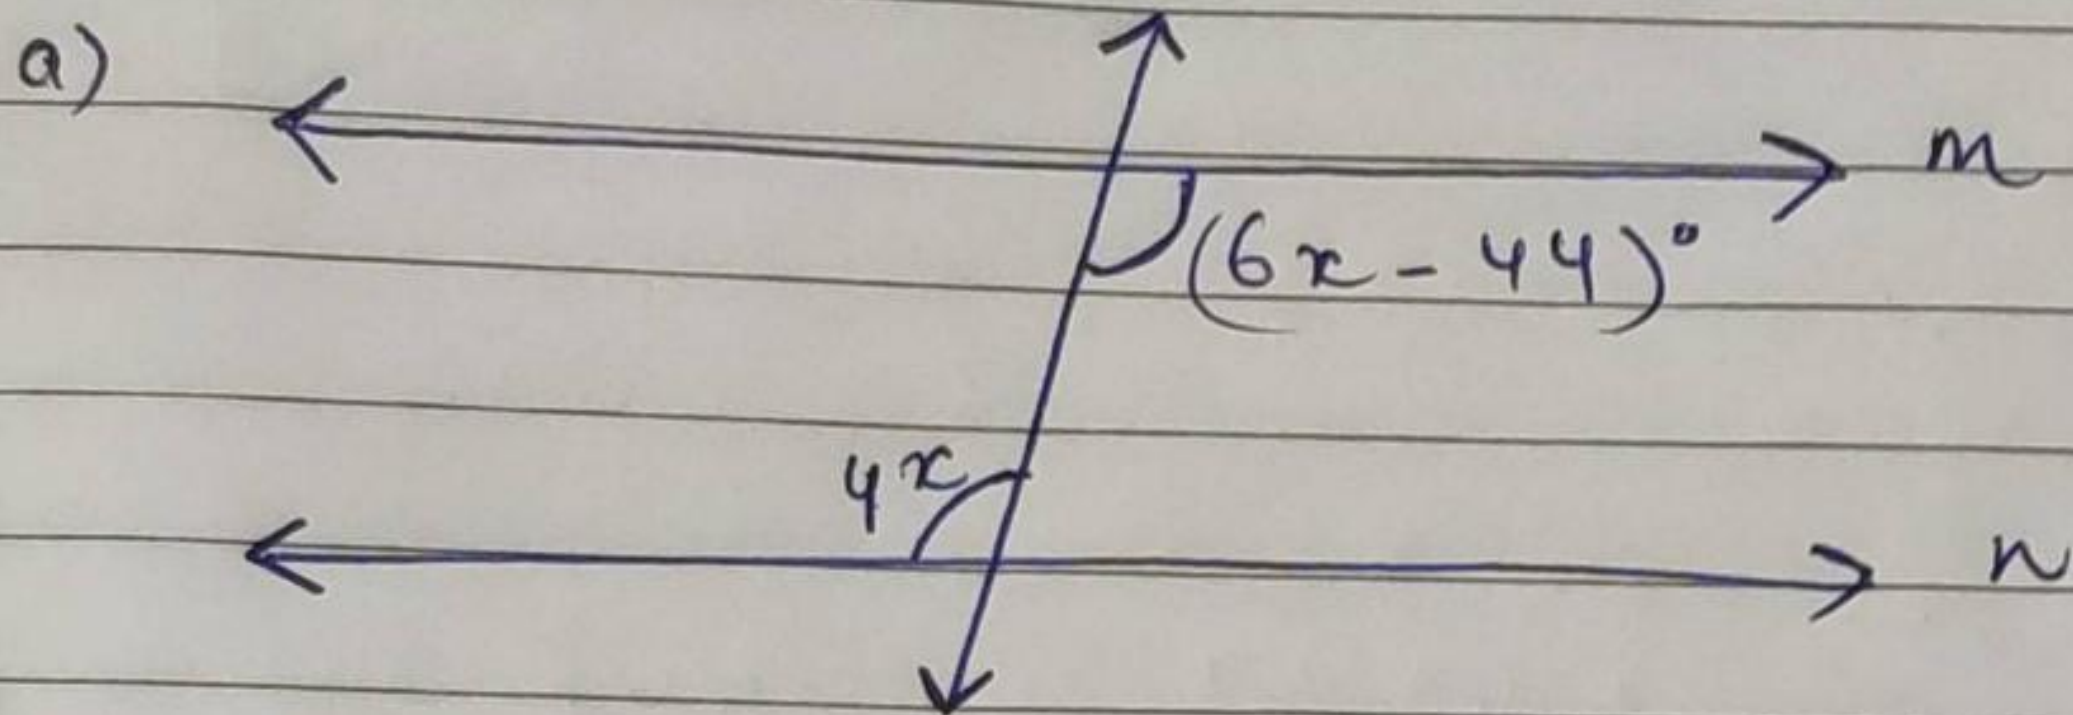

Q2. Prove that the lines are parallel

Q3. Find the value of  $x$  which makes  $m \parallel n$ .

Ques 4.

Given:  $AD \parallel BC$        $AD = BC$

$AB \parallel DC$        $AB = DC$

To prove:  $\triangle AOB \cong \triangle COD$

Ques 5.

Given:  $AB \parallel CD$

$AD \parallel BC$

To prove: i)  $\angle A = \angle C$

ii)  $AD = BC$
